Hi Team,

I have captured the screenshots and supporting evidence while completing the **Multi-Environment Application Deployment Assessment** and saved them in this file with the appropriate naming/title.

Please review the document and let me know if any additional information or clarification is required.

Thank you.

Dhanashree

Evidence and Screenshots

Docker deployment on MacBook

Student and repository details

Item	Your value
Student name	Dhanashree Salunke
GitHub repository URL	https://github.com/dhanacodes24/multienv-deployment.git
Deployment status	Working
Date of submission	14-11-2026

Access URLs and ports

Service	Port	URL
Frontend	3000	http://localhost:3000
Development environment	3000	http://localhost:3000/dev
Production environment	3000	http://localhost:3000/prod
Dev backend API	3001	http://localhost:3001/api/tickets
Prod backend API	3002	http://localhost:3002/api/tickets
MongoDB	27017	Internal only (mongo:27017)

Screenshots

S01 Environment specs

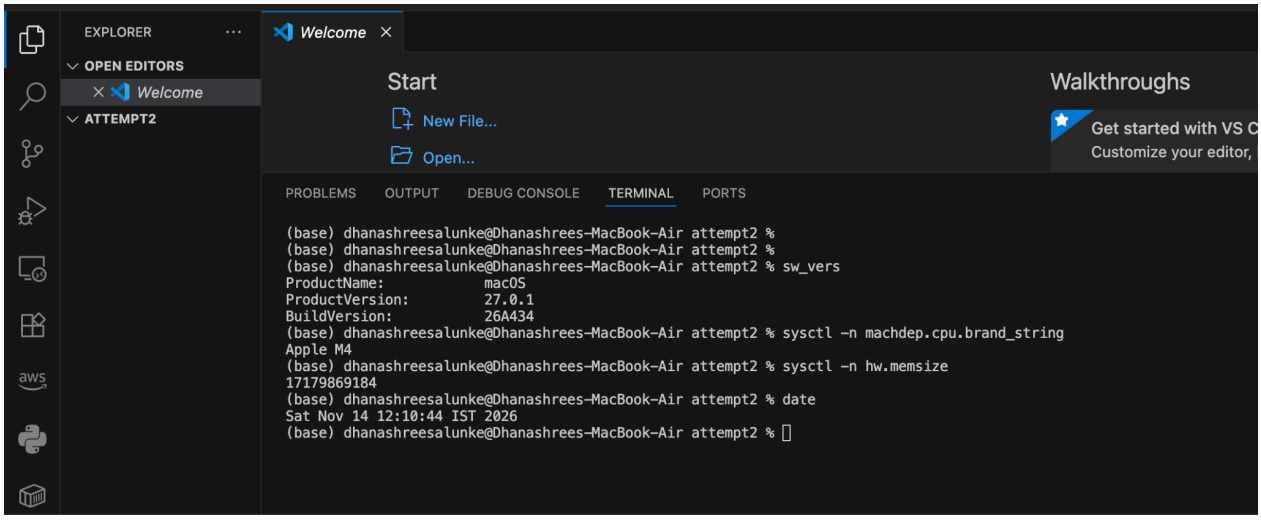

Capture: sw_vers, chip and memory output

Command / URL: `sw_vers | sysctl -n machdep.cpu.brand_string | sysctl -n hw.memsize`

`sw_vers` → Shows your macOS version details

`sysctl -n machdep.cpu.brand_string` → Displays your CPU/processor model name

`sysctl -n hw.memsize` → Shows total RAM installed in bytes

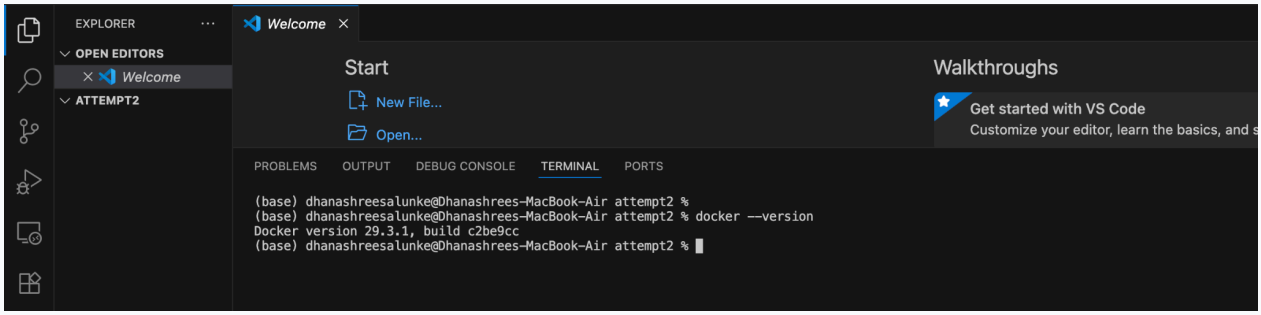

01-env-specs

S02 Docker and Compose versions

Capture: Both versions visible

Command / URL: `docker --version` | `docker compose version`

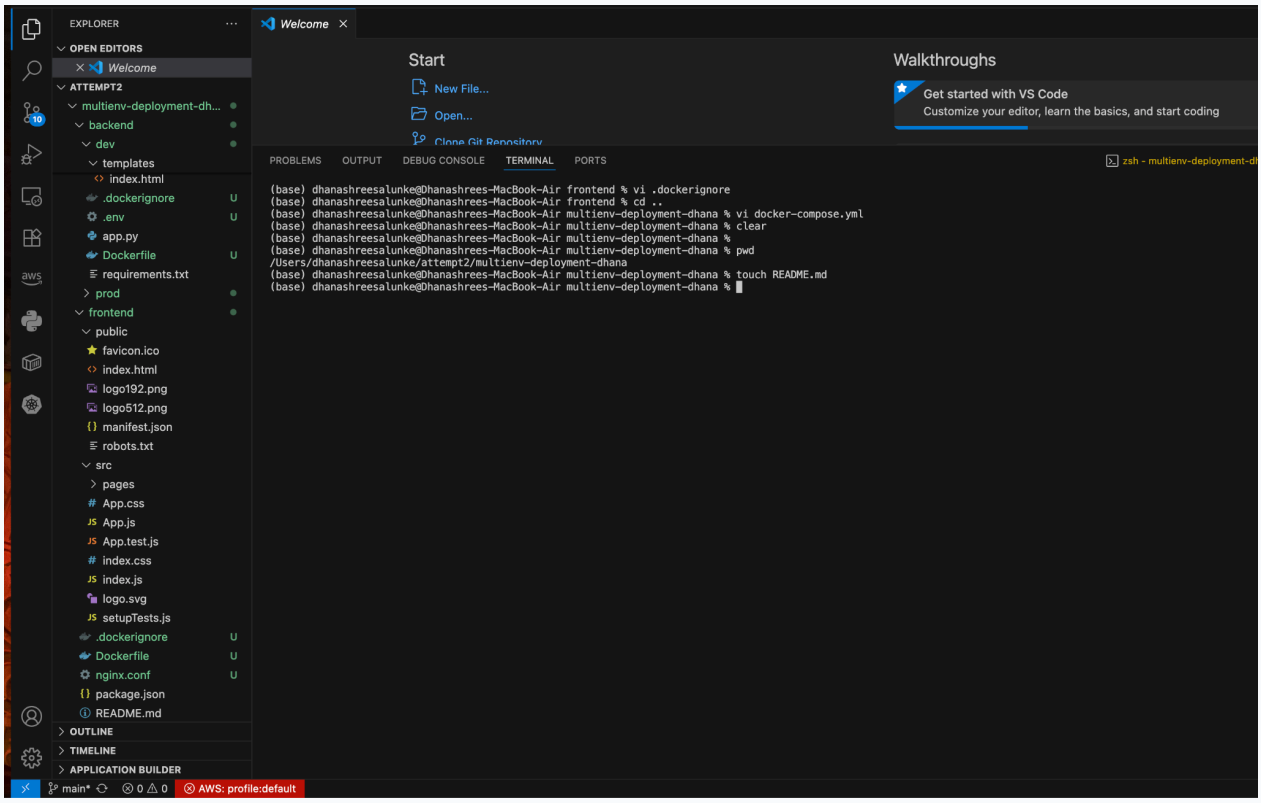

`02-docker-versions`

S03 Project structure in VS Code

Capture: Explorer with backend, frontend and root files expanded

Command / URL: `VS Code Explorer panel`

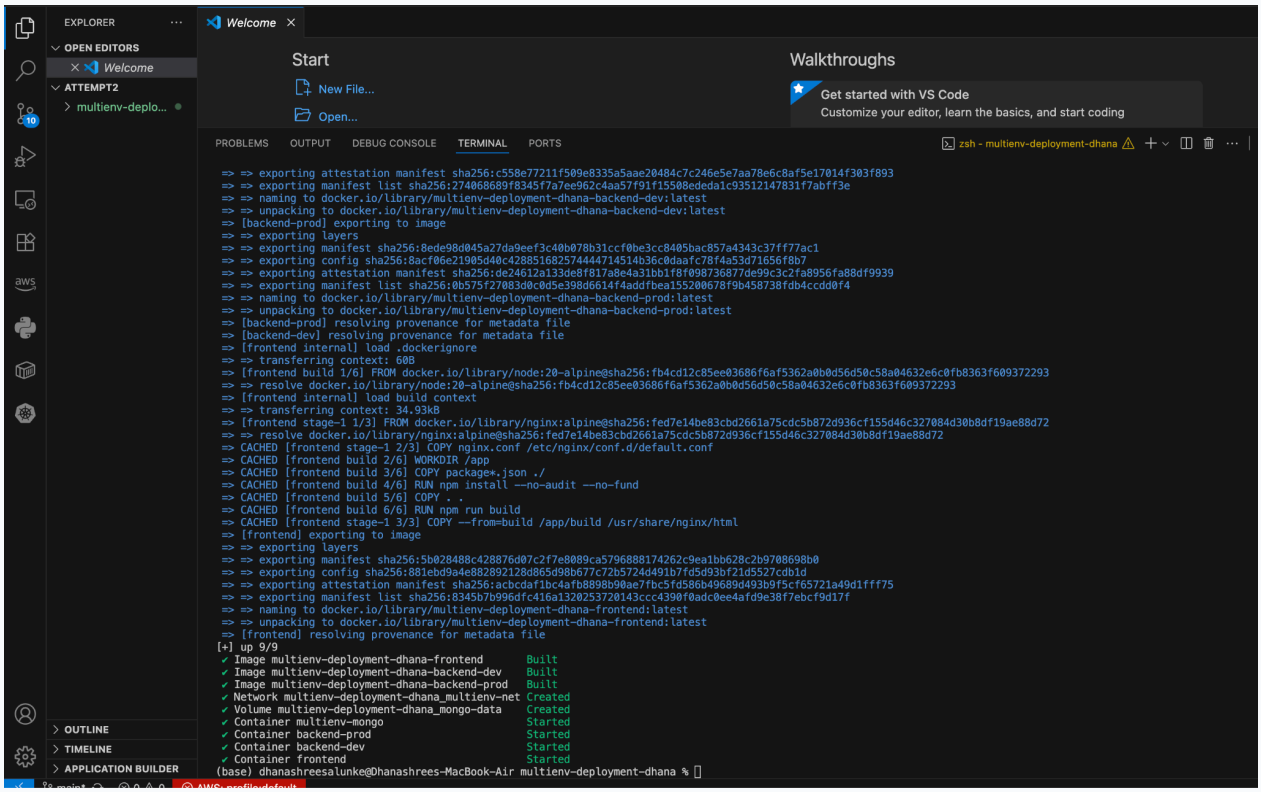

`03-project-structure`

S04 Build and start

Capture: End of the build output, all containers Started

Command / URL: `docker compose up --build -d`

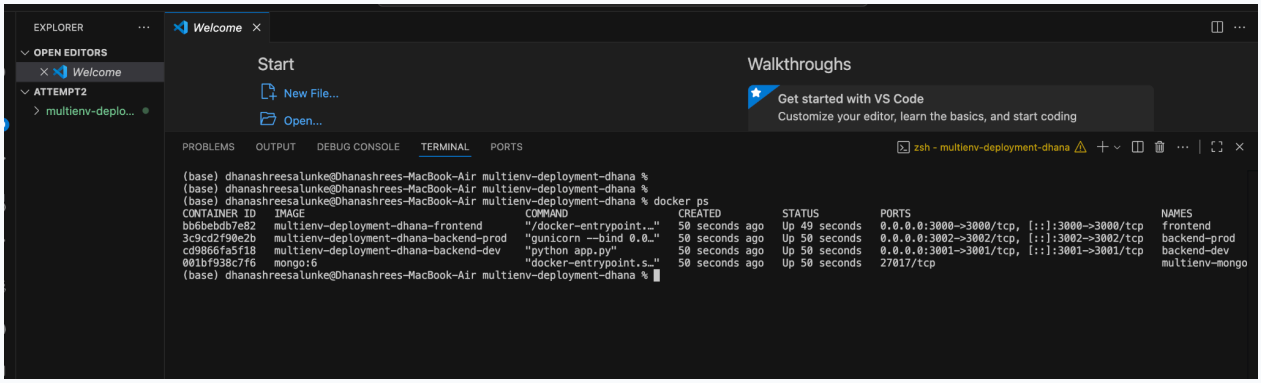

04-compose-up

S05 Running containers

Capture: All 4 containers Up with ports published

Command / URL: `docker ps`

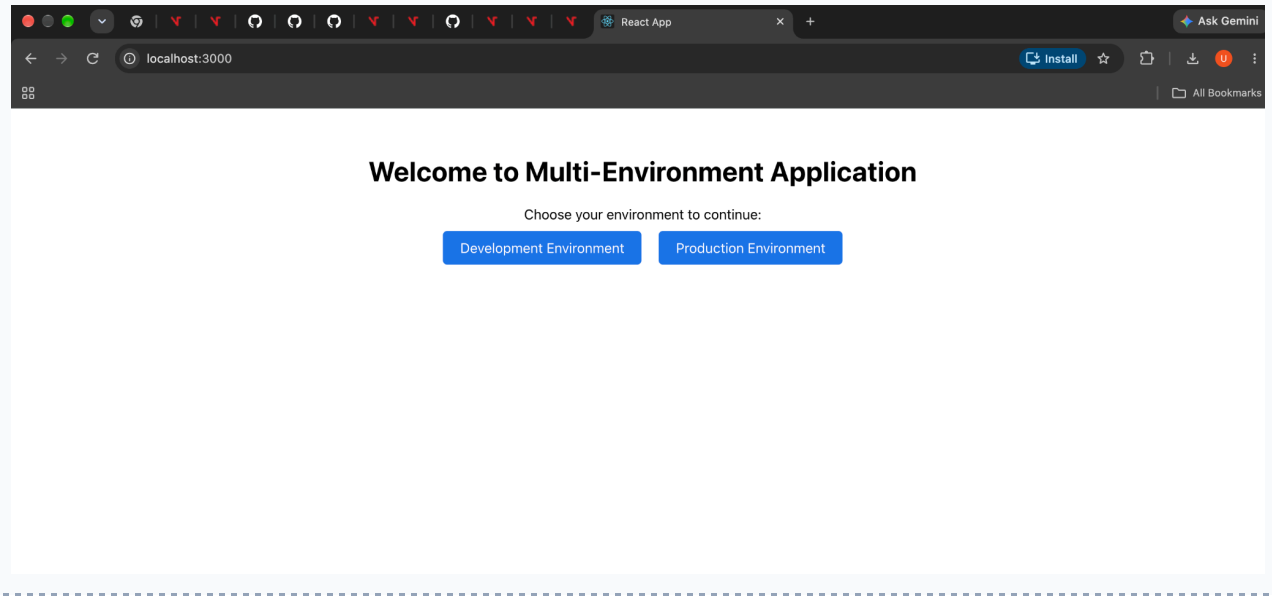

`05-docker-ps`

S06 Frontend home page

Capture: Address bar visible

Command / URL: `http://localhost:3000`

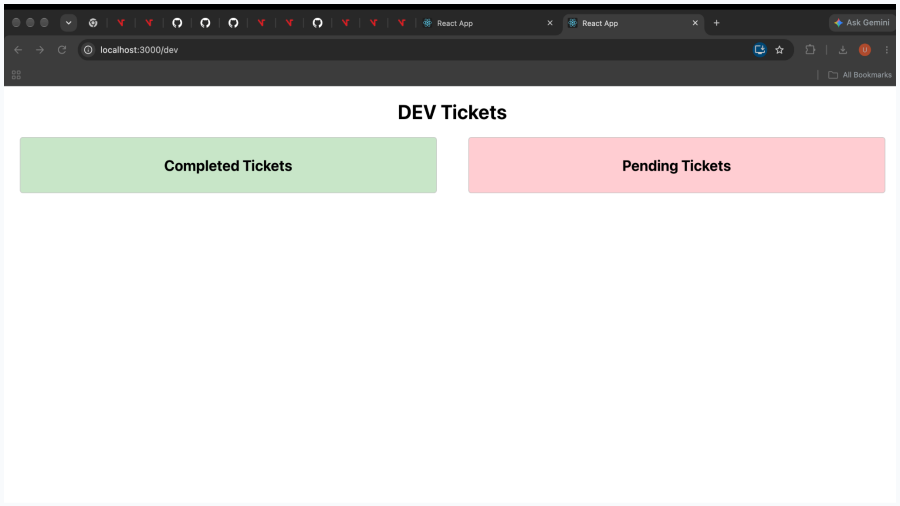

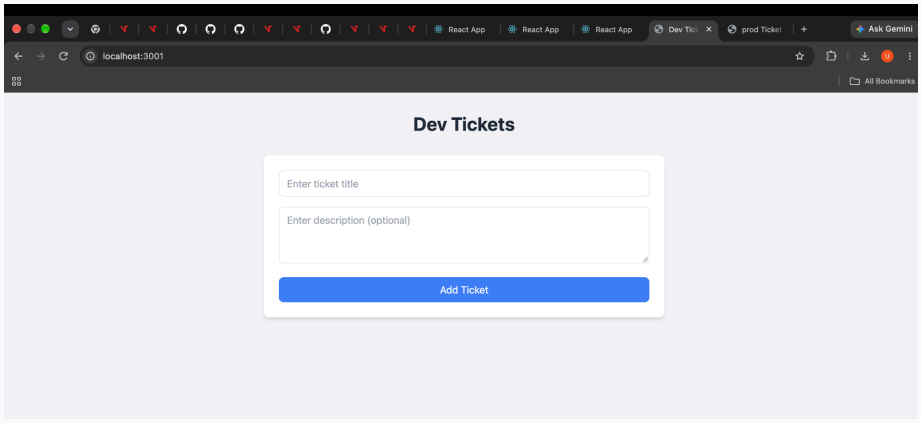

`06-frontend-home`

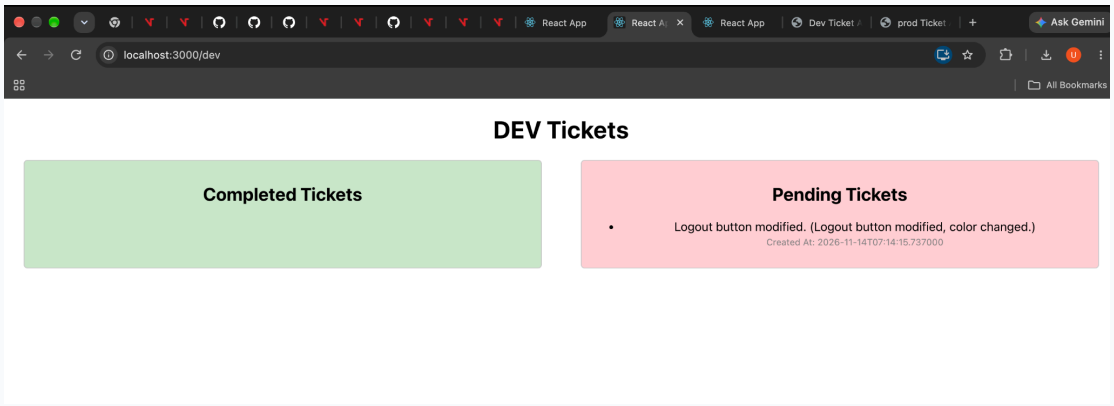

S07 Development environment page

Capture: Address bar visible, dev tickets shown

Command / URL: `http://localhost:3000/dev`

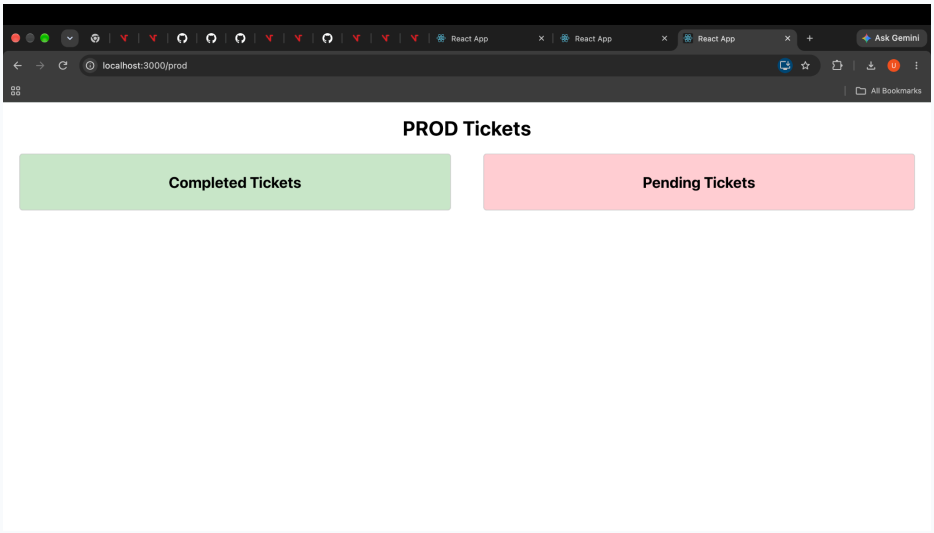

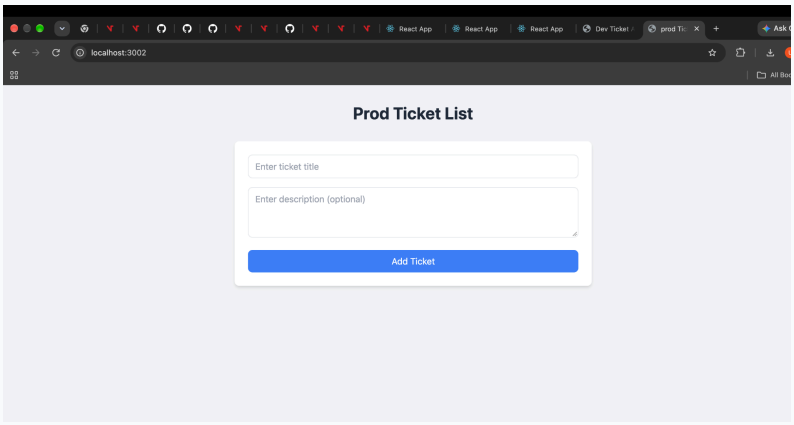

`07-frontend-dev`

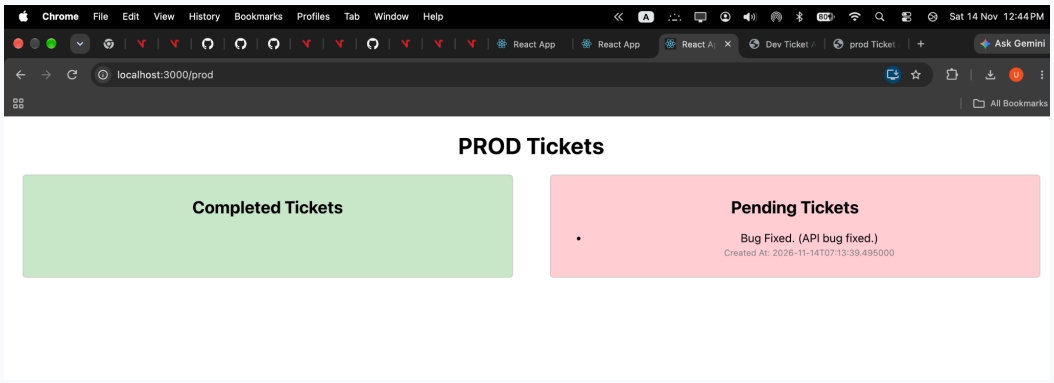

S08 Production environment page

Capture: Address bar visible, prod tickets shown

Command / URL: `http://localhost:3000/prod`

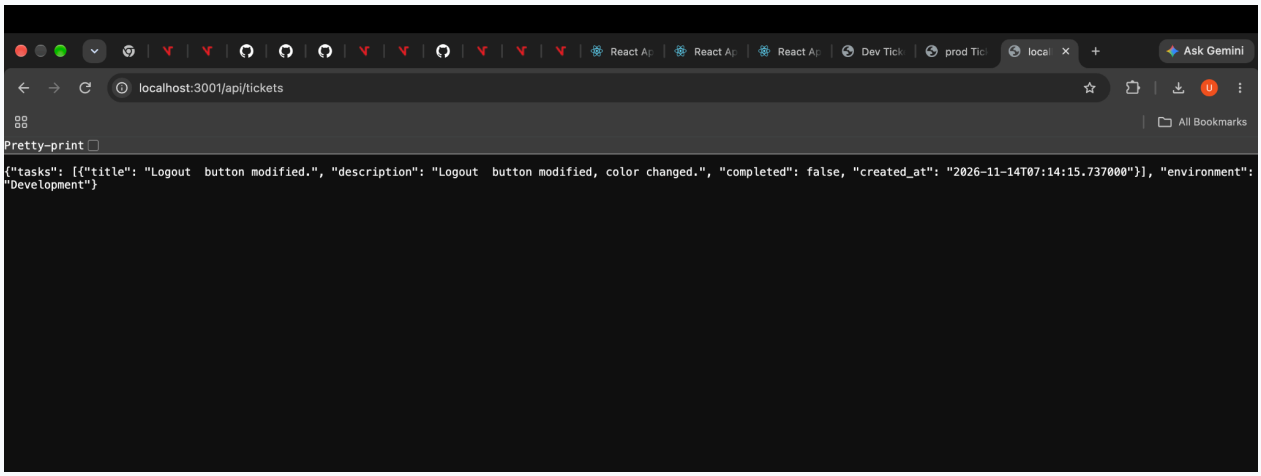

`08-frontend-prod`

S09 Dev backend API

Capture: JSON with "environment": "Development"

Command / URL: `http://localhost:3001/api/tickets`

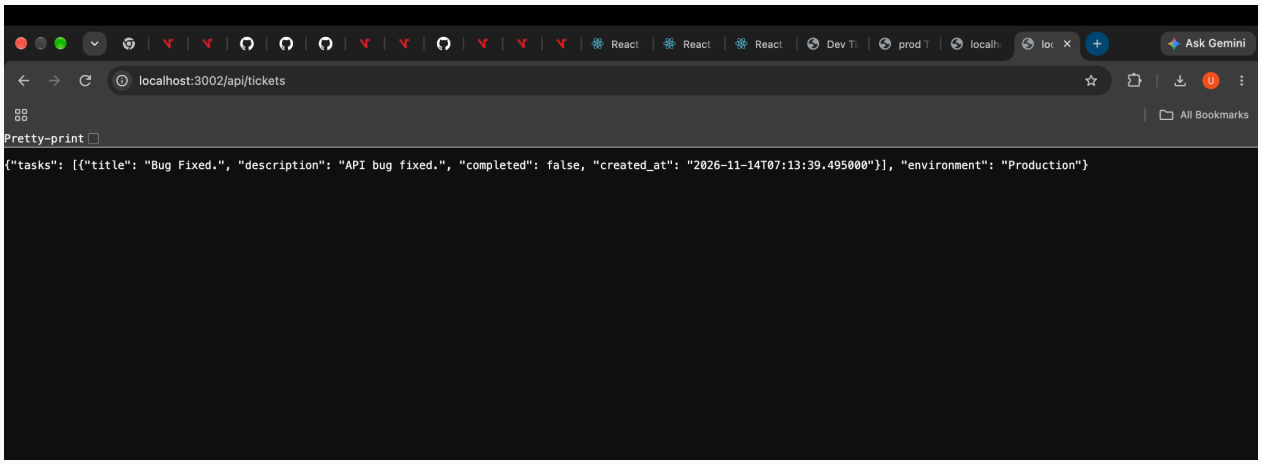

09-dev-api

S10 Prod backend API

Capture: JSON with "environment": "Production"

Command / URL: `http://localhost:3002/api/tickets`

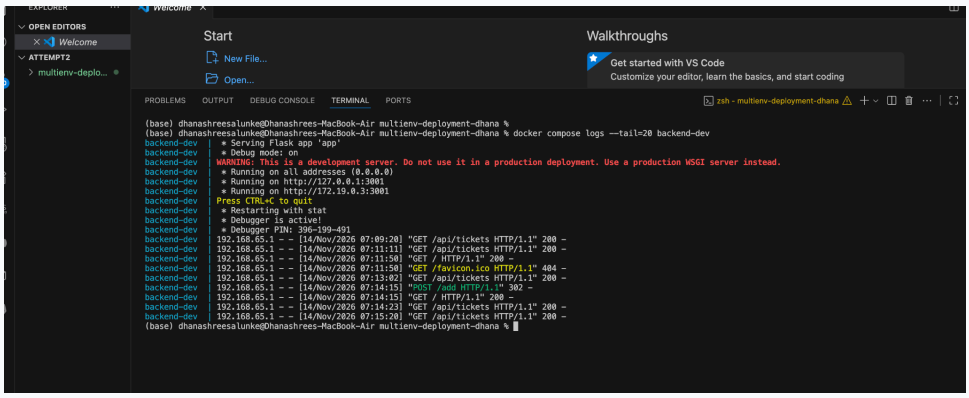

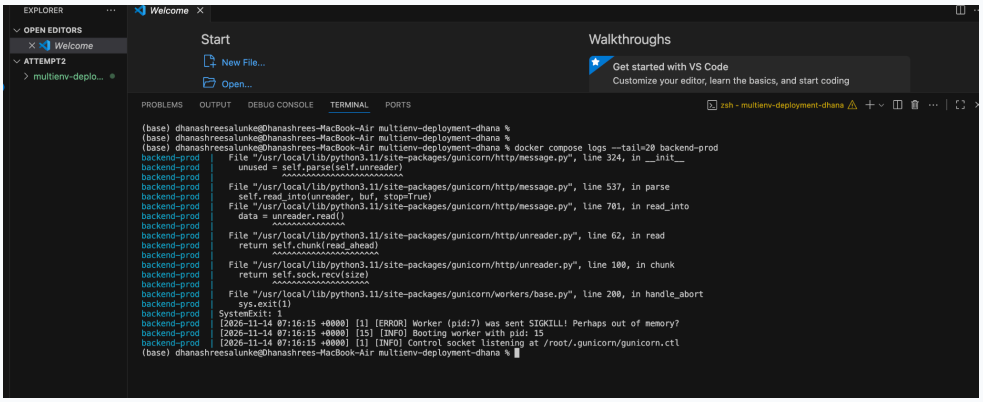

10-prod-api.png

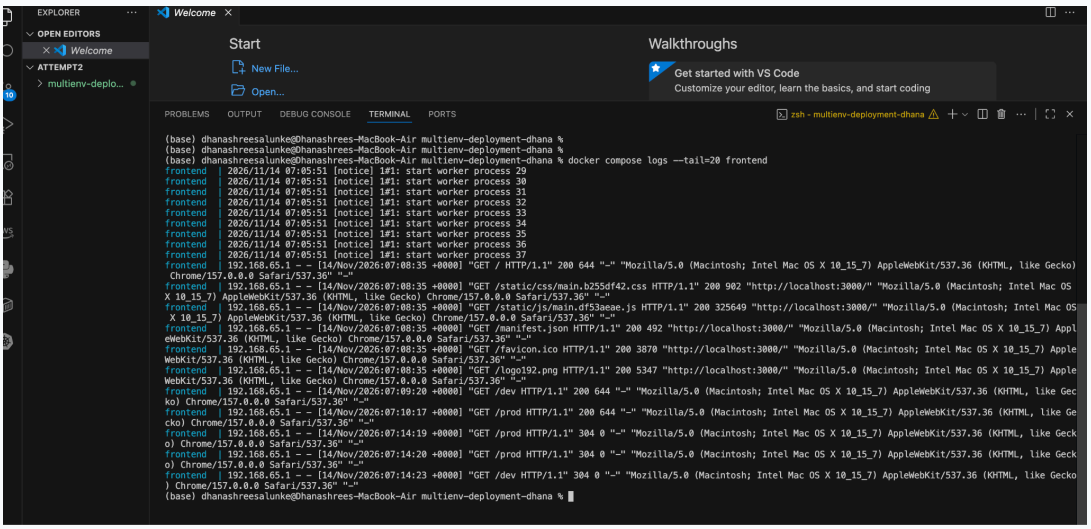

S11 Service logs

Capture: Logs showing requests (GET /api/tickets 200)

Command / URL: `docker compose logs --tail=20 backend-dev and backend-prod, frontend`

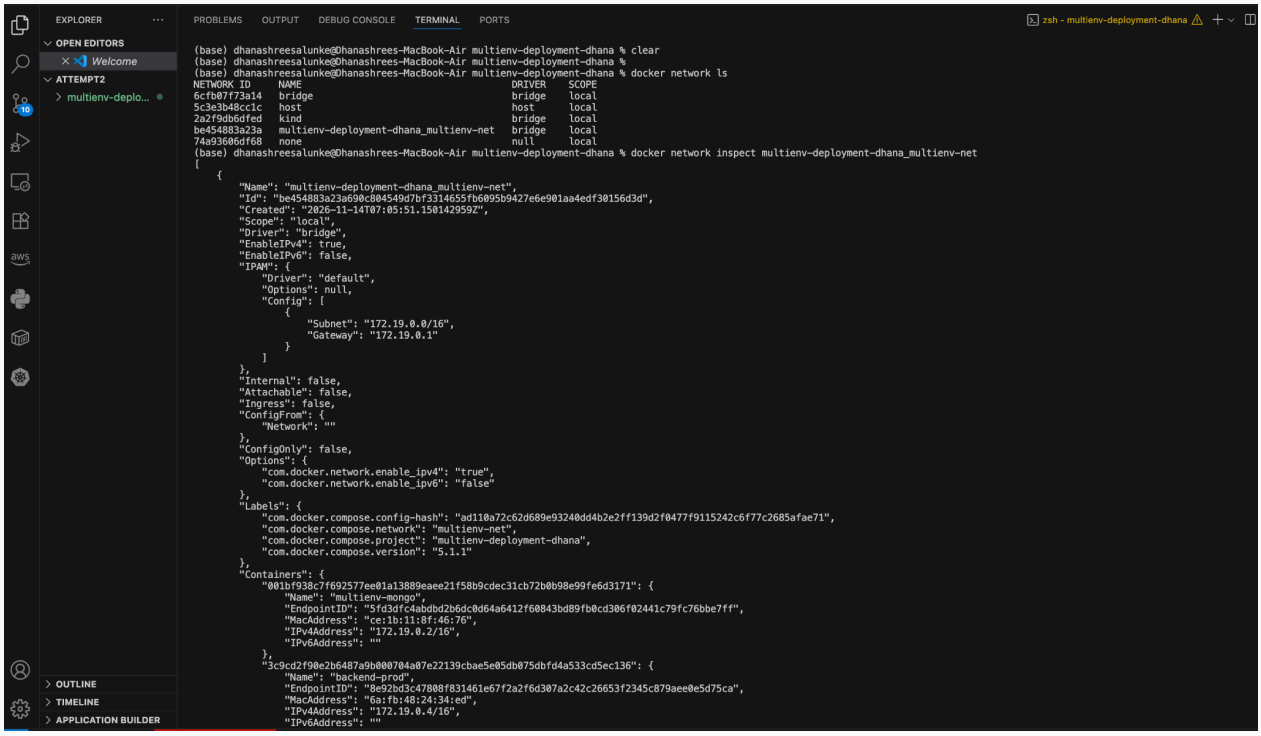

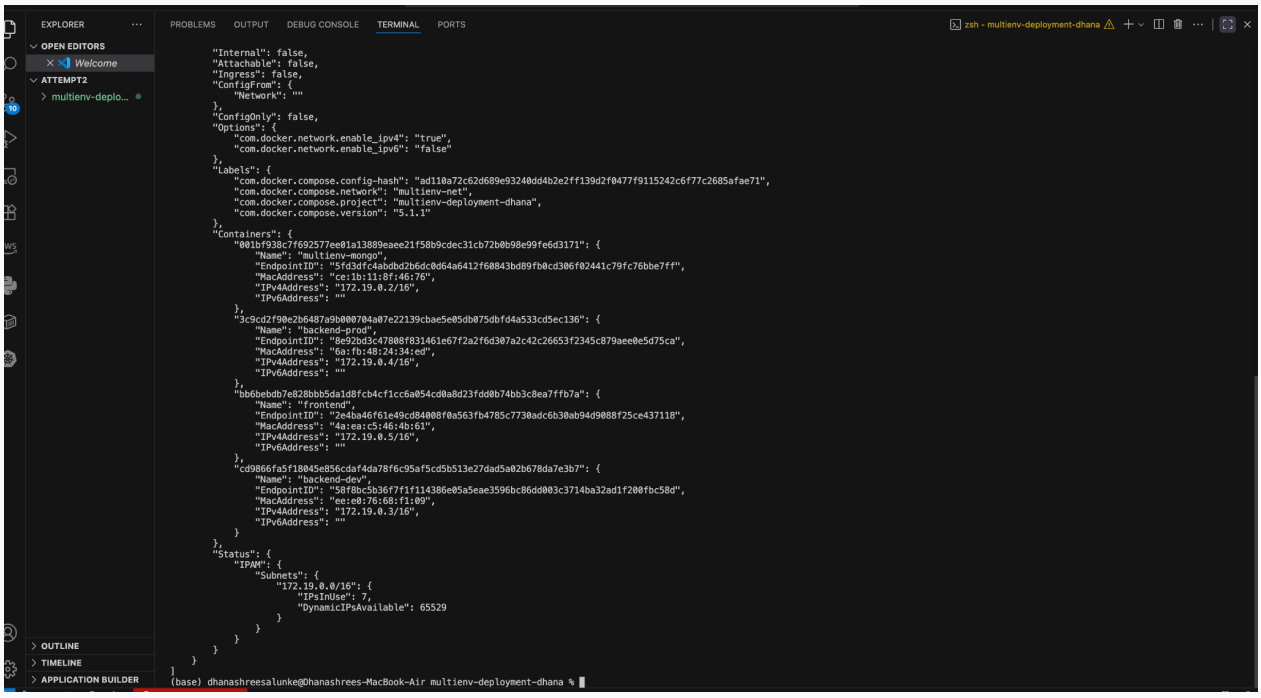

11-service-logs

S12 Network inspect

Capture: All 4 containers listed under Containers

Command / URL: `docker network inspect multienv-deployment-dhana_multienv-net`

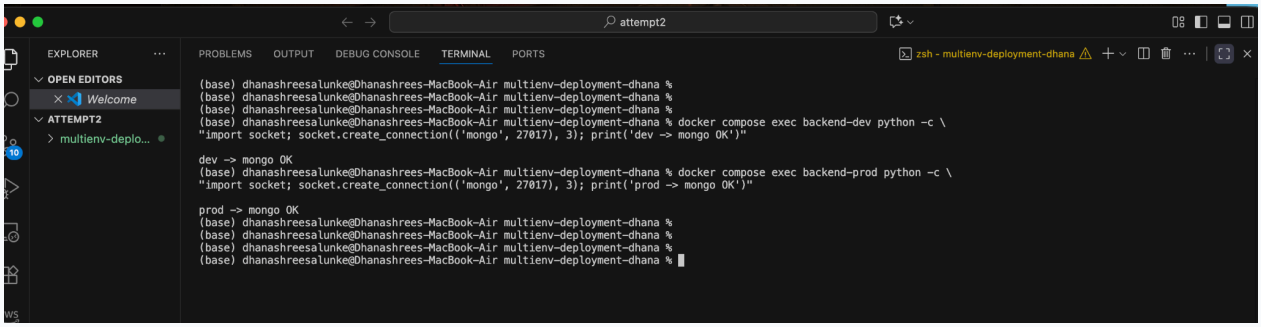

12-network-inspect

S13 Inter-service connectivity

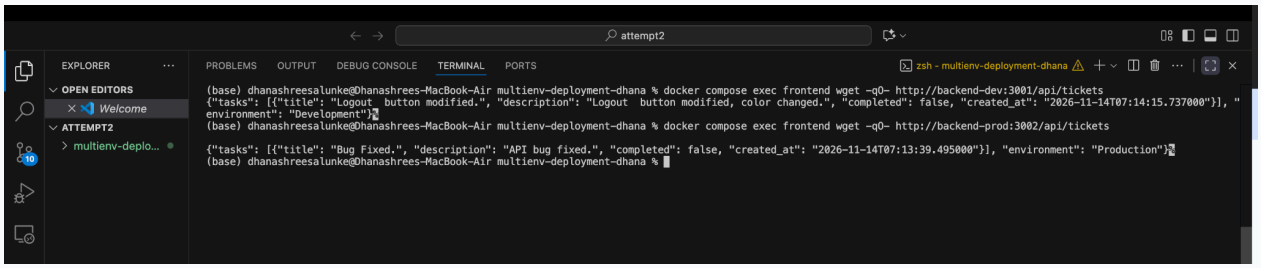

Capture: Backends reach mongo, frontend reaches both backends

Command / URL: `docker compose exec ...` (Step 11.2 and 11.3 of the guide)

Backends can reach MongoDB

Frontend container can reach both backends

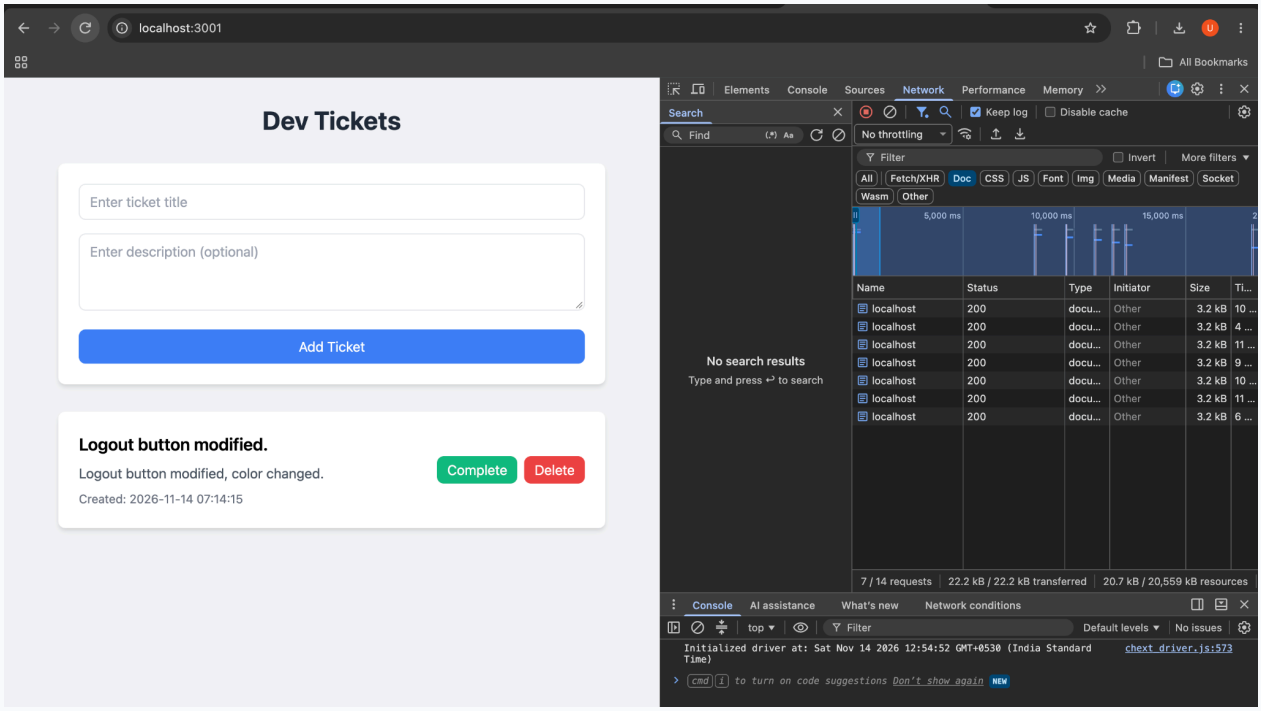

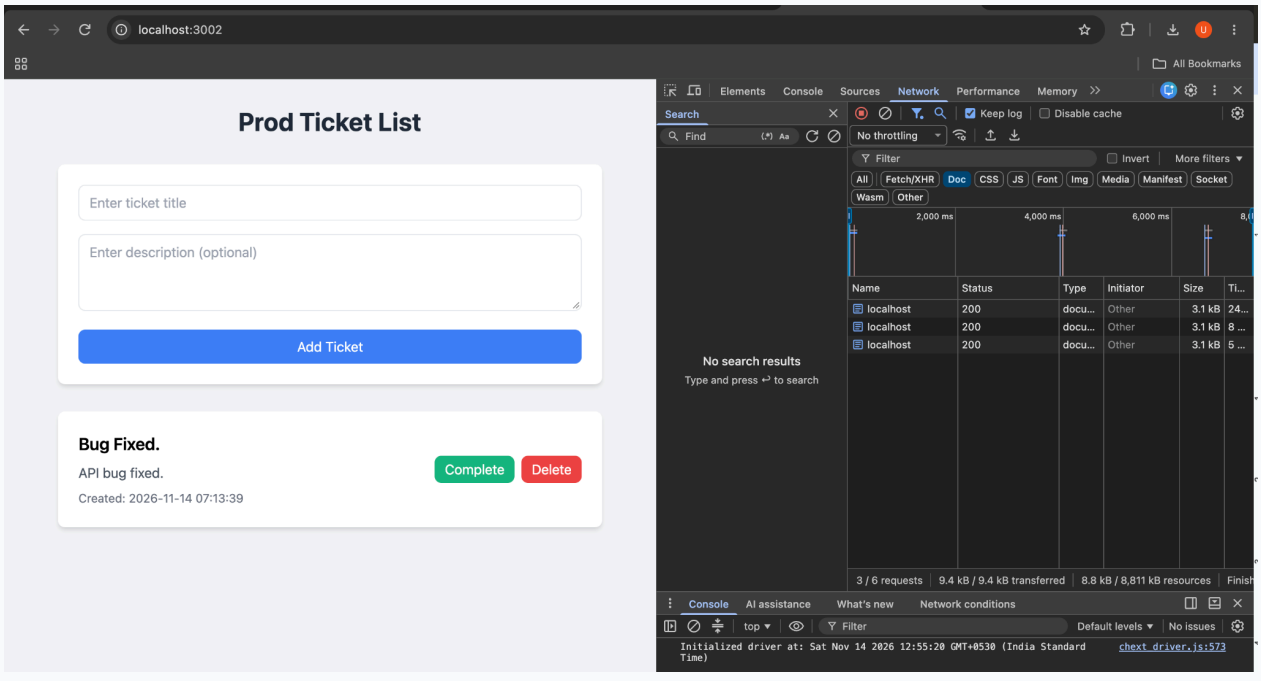

13-connectivity

S14 Browser DevTools Network tab

Capture: Request to localhost:3001 or 3002 with status 200

Command / URL: `Cmd+Option+I, Network tab, refresh /dev and /prod`

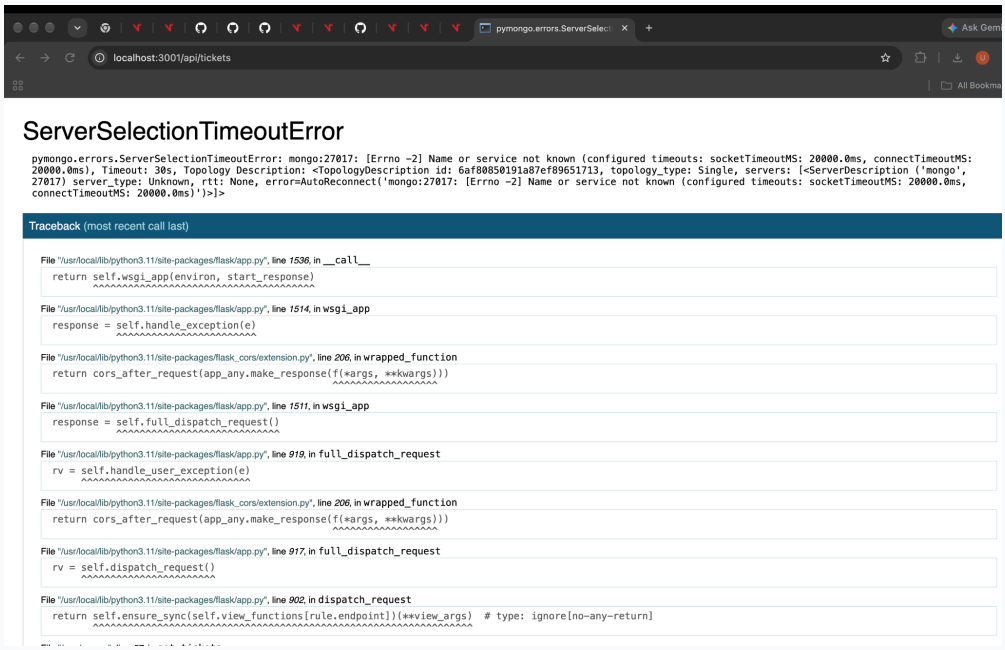

`14-devtools-network`

S15 Troubleshooting drill

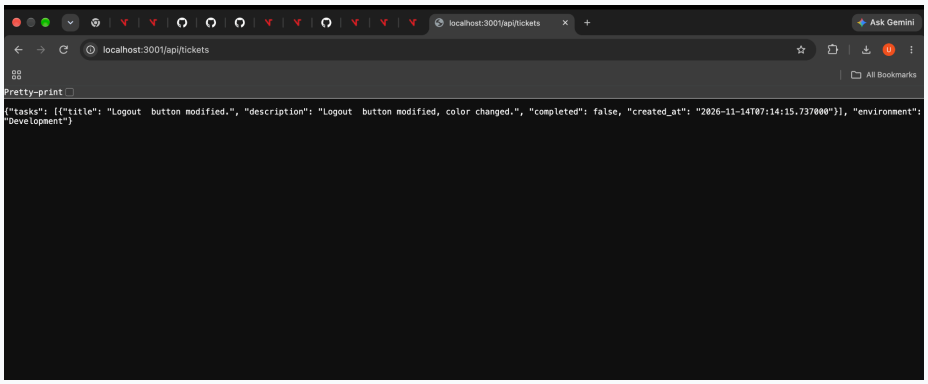

Capture: Error log with mongo stopped, then working response after start

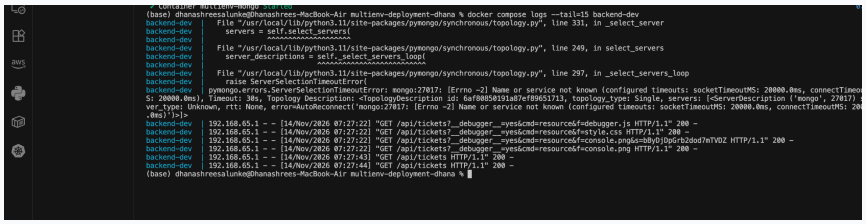

Command / URL: `docker compose stop mongo` | `docker compose start mongo`

`docker compose stop mongo`

`docker compose start mongo`

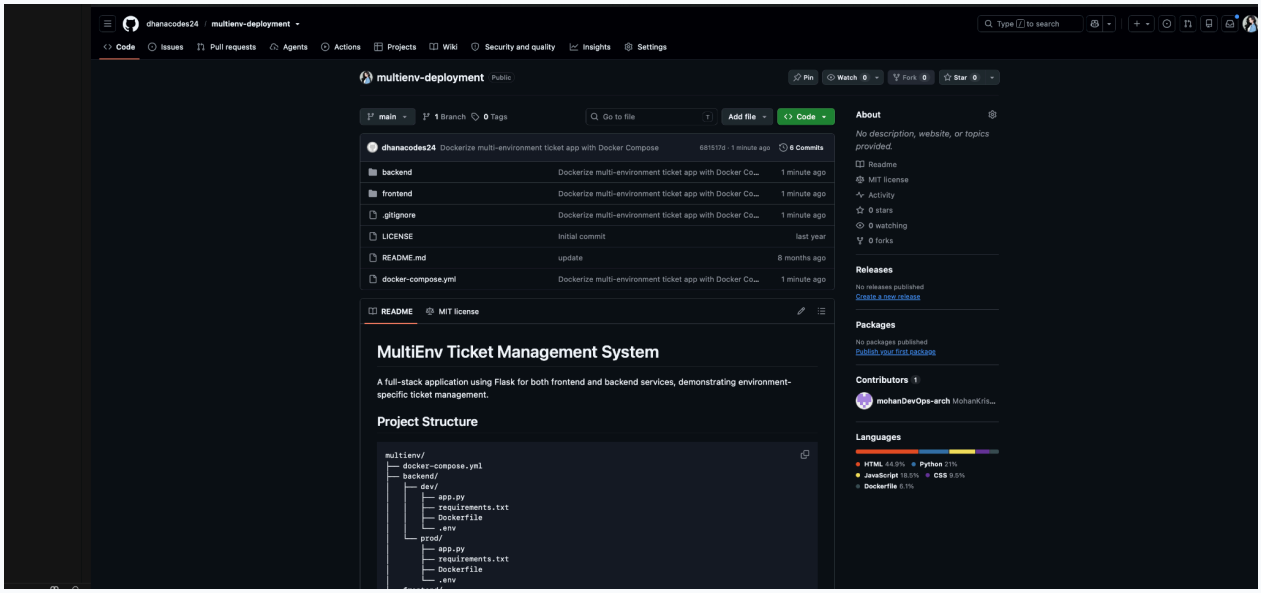

15-troubleshooting

S16 GitHub repository

Capture: Public repo page showing all files and folders

Command / URL: `https://github.com/dhanacodes24/multienv-deployment.git`

16-github-repo
